DETAILED ACTION

Priority

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Information Disclosure Statement

2. The information disclosure statement filed 9/17/2004 has been fully considered. An initialed copy of said IDS is enclosed herein.

Drawings

3. The drawings filed 3/17/2004 are acceptable.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

5. Claims 1-3 are rejected under 35 U.S.C. 102(b) as being anticipated by JP2001-270031 (herein referred to as "Nisshin").

Nisshin teaches a painted metal sheet for use as a dew-preventing cladding member which comprises a metal plate coated with a coating with a spectral-emissivity of 0.5 or more in a wavelength region of 4-6 μ m, and an infrared emissivity of 0.85 or

more (paragraph 0008). Said coating has a surface roughness of 2-20um by arithmetical mean deviation of profile and 5-60um by average wavelength of undulation (paragraph 0008).

With respect to the claimed solar radiation reflectance limitations of claims 1 and 3, applicant's attention is pointed to the examples of Nisshin. Specifically, the examples comprise 50wt% titania. Applicant notes in the specification that the solar radiation reflectance is raised to a value above 0.2 by dispersion of titania at a ratio of 5wt% or more into the paint. Since the coatings of Nisshin comprise more than 5wt% titania, said coatings are herein understood to inherently meet the claimed solar radiation reflectance limitations of claims 1 and 3.
